DETAILED ACTION

Restriction/Election

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 (in part), drawn to compounds where **A** in formula I is nitrogen (pyrimidine), classified in class 544 and subclasses 333 and 335.
 - II. Claims 1-23 (in part), drawn to compounds where **A** in formula I is carbon (pyridine), classified in class 546, subclass 323.

Groups I-II are directed to structurally dissimilar compounds such that the variable core created by the varying definitions of **A** in formula I do not belong to the same recognized class of chemical compounds in the art, and references anticipating one invention, would not render obvious the others. Group I is different from Group II, since it is drawn to pyrimidines (six-membered ring with 2 nitrogens at 1,3-positions). Group I is drawn to pyridines (six-membered ring with one nitrogen). Thus, separate searches in the literature as well as in the U.S. Patent Classification System would be required. Each group's compounds are made and used independently of each other and could support separate patents. The compounds differ significantly in chemical structures. One skilled in the art would not consider such diverse structure equivalents of each other.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1624

A telephone call was made to Mr. George Wang on March 9, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicants requested a written restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
